

## **The Red-shifted Sun's Spectrum**

**How can you prove that the Red-shift is a distant indicator?**

How we can prove that the red-shift is a distant indicator? Experiment is not so expansive. Of course mainstream will never spend even a cent to help you. You can call your friends. Red-shift was a huge problem for the cyclic and infinite universe still. Now the problem is solved. I came to the great idea to receive the red-shifted Sun's spectrum. Experiment about the red-shifted Sun's spectrum needs not so many money and time.

The great idea about the red-shifted Sun's spectrum experiment is that. The experiment has two variants: you can repeat!

1. Underwater experiment - Receiving of the different data ( $z_1, z_2, z_3...$ ) in the different interior of the fresh water. You need special underwater receiver of the spectrum and a good sunny day without wind and water waves.

2. The ground Experiment - Receiving of the different data ( $z_1, z_2, z_3...$ ) through thickest windowpane (0.2m, 0.4m, 0.6m, 0.8m, 1m, 1.2m, 1.4m....) -

I can help you to do thickest windowpane!

The ground Experiment needs a special construction of the spectrum receiver, 7-small tube of iron 200x50mm and 6-screw sockets. After screwing small iron tubes, you have to fill fully all tubes by liquid glass and both ends (surfaces) should be polished. Closely connected thickest windowpanes through small tubes create tired (quantum) light. Of course spectrum receiver receives red-shifted spectrum of the Sun.

I've sent technical description of the experiment for the my adherents.

Let me know about your results! [\*\*kmargiani@yahoo.com\*\*](mailto:kmargiani@yahoo.com)
