ABSTRACT

Since 1990s, I have built up an unparalleled knowledge and data base, framework for future expensive investigations. This research is geologic and astronomic proof. Existence of the sunken Atlantis kingdom which lies beneath of the Atlantic Ocean on the scarred floor is proved. There are almost exactly coordinates, if someone has enough money and burn with the desire to see graveyard of the Golden City, and the central temples beneath sea. During geo-catastrophes main designer of seafloor, a lot of fissure ejections and outflows are. There are modern exactly coordinates of the trident mountains and capital of the Atlantis as well as plausible coastal lines of three main islands: Poseidia, Ammon and Pluto.

There is used only plausible data during working. In the Plato's story the political fiery-tale about the war is decoded. There is no need to have great intellect to understand that the Stone Age Greeks had no chance against the platinum²⁹ age Atlantis. There is used only plausible data translated by Egyptian priest(s) from unknown ancient document for the Solon. The pre-flood mankind history during the difficult millenniums is cut into pleases. Our ancient history reached to us by different split cadres only, by the ancient myths, legends, epics and other historical sources. To choose plausible information in the ancient sources by West-Indian, Indian, Egyptian, Mesopotamian, Roman and Greece was very difficult and interesting. The investigation uses plausible maps by Athanasius Kircher (1669) and Phillippe Buache (1737). There are used modern data by wikipedia and Russian geological encyclopedia, information by prof. Charles H. Hapgood, Graham Hancock, etc. Reference consists by different researches. There are two modern revolution researches in the foundation of the investigation^{1, 4}

Atlantis is lost civilization and mysterious land which will never be forgotten. I have done hard work while searching and processing discrepant information about Atlantis. How happened that? Dear reader you will read detail geological explanation. It would not be ever decoded by fallacies of astronomical and geological mainstreams toward the blind alley.

First important conclusion is that; Atlantis is sunken by geological catastrophe (**geo-catastrophe**).

I want to explain how dangerous the Earth inside is. Is Atlantis, the lost civilization, a true place or just a tale from wily, old Plato? You will have to decide for yourself.

During geo-catastrophes main designer of the seafloors are lots of fissure ejections and outflows. The research has an important references; two revolution and broken ground researches for astronomical and geological mainstreams:

First is that "Cosmogeology and Isotopes Tell Sun's Origin and Operation." The research is greatest proof about "**lots of big bangs**". The truth of the stellar and planetary systems formation and secrets of the spiral galaxies and globular clusters are decoded. There is proved "**recycling renewing and evolution processes in the infinite universe which has no origin and margins**". This is a true framework for future investigations in cosmology and Astronomy. Mainstreams violently fighting against me and my letters in the main forums are prohibited or have been disappeared without traces. They can prevent development of the scientific fields but - **Truth is victorious!**

Second is that "Cosmogeological Catastrophic Plate Tectonics: A Global Flood Model of Earth History". The revolution research is proof and framework for the future Geology. I don't have any problem to the "**Gradualism**" within peaceful periods only. Problem is that the Catastrophic Plate Tectonics unacceptable for the mainstreams. The Ostrich position will not help mankind to survive die. Modern mainstream scientists could not ever seen fissure outflows. The event will repeat after few centuries only. These events unacceptable for them still. When the mankind will see that it would be very late. Thus future of the Geology is that "**Gradualism + Catastrophic plate tectonics**". All other ways are blind alley for the mainstreams and indescribable suffering brought upon mankind of Earth as well as immense destruction worldwide.

The Earth's main magnetic field can be approximated by an axial, geocentric dipole. The remaining non-dipole field (within concentration of ferromagnetic elements – magnetic anomalies) is much smaller and is a regional rather than a global feature – quite large changes can occur in a few millenniums. This review is concerned with changes in the dipole component of the geomagnetic field, and one of the problems is in separating the non-dipole from the dipole contributions to the field. Unlike the many determinations of the direction of the Earth's magnetic field in the past (which have led to fundamental contributions to our understanding of plate tectonics and shown that the field can on occasion reverse its polarity), estimates of the intensity of the field are comparatively few, especially before the Holocene. This is mainly the result of experimental difficulties in obtaining reliable measurements of the field. These problems are discussed in some detail and are followed by a short account of archaeomagnetic intensities and lots of results obtained within excursion zones. Measurements for the last 60,000 years from petrified lavas and lacustrine and oceanic sediments are reviewed and results from different areas compared. An asymmetric saw-tooth pattern has been observed in some of the records over the last 60,000 years, and this rather controversial question is discussed.

Although short reversals of the field are responsible for magnetization jump, it is more likely that in general they are the result of changes in the strength of the Earth's magnetic field.

The intensity and direction of the Earth's magnetic field vary from place across the Earth and also show temporal changes. These range from variations on a timescale of hundreds of years and on a longer timescale to complete reversals of polarity. The short period transient variations produce large changes in the Earth's magnetic field and enduring dropping for millenniums. It arises from causes outside the Earth. Spherical harmonic analysis of the Earth's magnetic field shows that it is of internal origin and to a first approximation it can be represented by a geocentric axial dipole. Although much weaker, the
